

Mr. President:

We support increased offshore development, but don't forget...

JOBS. JOBS. JOBS.

American mariners on American vessels made it possible to tap into our offshore resources. But today a startling amount of offshore service work is being performed by foreign companies, with foreign vessels and foreign workers.

On behalf of the more than 100,000 Americans who work on offshore vessels, in the shipyards that build them, and the businesses that keep them running, we urge you to ensure that the jobs created by offshore energy are American jobs.

Your Administration is currently reviewing its interpretations of the Jones Act. Enforce the law the way it was originally written. Entrust our energy security to the hands of American mariners. Stem the tide of foreign vessels working in the U.S. offshore energy sector.

Please act promptly before U.S. companies and U.S. workers are shut out of America's energy future.

**It's American Jobs. It's Security.
And It's Our Future.**
